# GE23131-Programming Using C-2024

Question 1

Correct

Marked out of 1.00

▼ Flag question

Given a string,  $\mathbf{s}$ , consisting of alphabets and digits, find the frequency of each digit in the given string.

## **Input Format**

The first line contains a string, *num* which is the given number.

#### **Constraints**

#### $1 \leq len(num) \leq 1000$

All the elements of num are made of English alphabets and digits.

## **Output Format**

## Sample Input 0

a11472o5t6

## **Sample Output 0**

0210111100

# **Explanation 0**

In the given string:

- · 1 occurs two times.
- **2, 4, 5, 6** and **7** occur one time each.

The remaining digits 0, 3, 8 and 9 don't occur at all.

**Answer:** (penalty regime: 0 %)

```
#include <stdio.h>

int main()

char str[1000];
 scanf("%s", str);
 int hash[10] = {0, 0, 0, 0, 0, 0, 0, 0, 0};

int temp;

for (int i = 0; str[i] != '\0'; i++)

temp = str[i] - '0';

temp = str[i] - '0';

if (temp < 0.88 temp > 0)
```

```

Question **2** 

Correct

Marked out of 1.00

Flag question

Today, Monk went for a walk in a garden. There are many trees in the garden and each tree has an English alphabet on it. While Monk was walking, he noticed that all trees with vowels on it are not in good state. He decided to take care of them. So, he asked you to tell him the count of such trees in the garden.

**Note**: The following letters are vowels: 'A', 'E', 'I', 'O', 'U', 'a', 'e', 'i', 'o' and 'u'.

Input:

Each test case consists of only one string, each character of string denoting the alphabet (may be lowercase or uppercase) on a tree in the garden.

# Output:

For each test case, print the count in a new line.

## Constraints:

 $1 \le T \le 10$  $1 \le length of string \le 10^5$ 

#### **SAMPLE INPUT**

Question **3** 

Correct

Marked out of 1.00

Flag question

Given a sentence, **s**, print each word of the sentence in a new line.

# **Input Format**

The first and only line contains a sentence, s.

## **Constraints**

 $1 \leq len(s) \leq 1000$ 

# **Output Format**

Print each word of the sentence in a new line.

## Sample Input 0

This is C

# **Sample Output 0**

This

is

C

In the given string, there are three words ["This", "is", "C"]. We have to print each of these words in a new line.

**Answer:** (penalty regime: 0 %)

```
#include <stdio.h>
 2
 3
    int main()
 4 ▼ {
        char s[1000];
 5
        scanf("%[^\n]s", s);
        for (int i = 0; s[i] != '\0'; i++)
 8 ,
            if (s[i] != ' ')
 9
10
                printf("%c", s[i]);
            else
11
                printf("\n");
12
13
14
        return 0;
15
16
```

is is fun fun Passed all tests! < **Input Format** You are given two strings, **a** and **b**, separated by a new line. Each string will consist of lower case Latin characters ('a'-'z'). **Output Format** In the first line print two space-separated integers, representing the length of **a** and **b** respectively. In the second line print the string produced by concatenating  $\boldsymbol{a}$  and  $\boldsymbol{b}$  ( $\boldsymbol{a} + \boldsymbol{b}$ ). In the third line print two strings separated by a space, **a'** and **b'**. **a'** and **b'** are the same as **a** and **b**, respectively, except that their first characters are swapped. **Sample Input** abcd ef **Sample Output** 

ebcd af

# **Explanation**

```
a = "abcd"
b = "ef"
|a| = 4
|b| = 2
a + b = "abcdef"
a' = "ebcd"
b' = "af"
```

## **Answer:** (penalty regime: 0 %)

```
#include <stdio.h>
 2
 3
    int main()
 4 🏻
 5
        char str1[10], str2[10], t;
        int i = 0, j = 0;
 6
        int count1 = 0, count2 = 0;
        scanf("%s", str1);
 9
        scanf("%s", str2);
10
11
        while (str1[i] != '\0')
12
13 🔻
            count1++;
14
15
            i++;
16
17
        while (str2[j] != '\0')
18
19 -
```

```
23
24
        printf("%d %d\n", count1, count2);
        printf("%s%s\n", str1, str2);
25
26
27
       t = str1[0];
       str1[0] = str2[0];
28
29
        str2[0] = t;
30
        printf("%s %s", str1, str2);
31
32
33
        return 0;
34 }
35
```
